// QUARTERLY TOKEN HOLDER REPORT

novora

MetaDAO

Q1 2026.

PERIOD Q1 2026 (JAN 1 — MAR 31)

PUBLISHED APRIL 2026

// 01 · EXECUTIVE SUMMARY

Building through *the cycle.*

Q1 fees declined sequentially as Solana ICO sentiment cooled. The platform still shipped its largest structural upgrade since launch: Futardio, the Omnibus liquidity migration, the Ranger liquidation, and the Colosseum STAMP integration all closed during the quarter.

Q1 REVENUE	TREASURY (Q1-END)	TOKEN PRICE	MCAP / ANN. REV
$556K	$12.24M	$2.77	19–24×
−78% vs Q4 2025	+524% vs Q4 open	−61% from ATH	Mid-cluster vs peers
Artemis · $556–700K incl. Meteora	$1.96M → $12.24M post-OTC	Jan 4 ATH above $10.50	vs ~10–15× range Q4

// HEADLINE NUMBER

> **$5.04M** *returned to RNGR holders via the first market-driven onchain liquidation in crypto governance history. Futarchy converted a contested governance question into a binding outcome.*

// 02 · METADAO & PLATFORM CONTEXT

The ownership coin *thesis.*

MetaDAO produces ownership coins: tokens with legal claim on the issuing entity, market-gated treasury spending, high float at launch with no insider tiers, and team unlocks gated on sustained price performance. The platform's products and fees follow from that asset-class definition.

STRUCTURAL BASELINE

Most crypto tokens have negative drift: opaque treasuries, foundation cash-outs, low float at launch with calendar-vesting insider allocations, and day-one CEX listings that exhaust marginal demand. Artificial scarcity inflates FDV; unlocks then bleed it out.

MetaDAO's ownership coins issue from a Cayman segregated portfolio bound by onchain governance. Treasury USDC sits under market oversight with monthly spending caps. If the token trades below NAV, holders can vote a buyback. If the team underdelivers, holders can vote a liquidation.

~40% high float at ICO, no private allocations, no insider tiers. Team performance package up to 50% of supply, structured as five tranches that unlock only at 2×, 4×, 8×, 16×, 32× ICO price (minimum 18-month cliff).

PRODUCT LINES

PRODUCT	STATUS
Curated ICO Launchpad	Live since Apr 2025
Futarchy Governance	Live since Nov 2023
Futarchy AMM (Secondary)	Live Oct 10, 2025
Meteora LP Position	100% protocol-owned
Futardio (Permissionless)	Launched Mar 4, 2026

Futarchy AMM: ~60% cumulative platform revenue since launch.
Meteora LP: ~40% of cumulative revenue.

// 03 · FINANCIALS & KEY METRICS

Q1 metrics *summary.*

METRIC	Q1 2026	VS Q4 2025
Total platform fees	$571K	-77%
Protocol revenue (Artemis)	$556K	-78%
Protocol revenue (Novora est., incl. Meteora LP)	$556–700K	-78% to -72%
Daily fees (Q1 avg)	~$6.3K	-72%
March exit-rate (daily, Futarchy AMM)	~$2.2K	—
TVL, AMM-resident (Q1-end)	$10.4M	-27%
TVL, platform-level (DefiLlama)	~$13M	—
META price (Q1-end)	$2.77	-57%
FDV (Q1-end)	$62.8M	-57%
MCap / Annualized revenue	**19–24×**	**vs ~10–15× Q4**

MetaDAO's published Q4 2025 figure was $2.52M; Artemis recorded $1.82M for the same period. Variance reflects Meteora LP fees not captured in Artemis's MetaDAO revenue feed.

METADAO · Q1 2026

READ

Two figures define the quarter: **$556K in protocol revenue (Artemis)** versus a **$556–700K range** when Meteora LP fees are included.

Monthly trajectory: **$368K → $121K → $67K**. Q1's revenue decline is fully explained by volume compression. The 0.5% take rate held throughout the quarter.

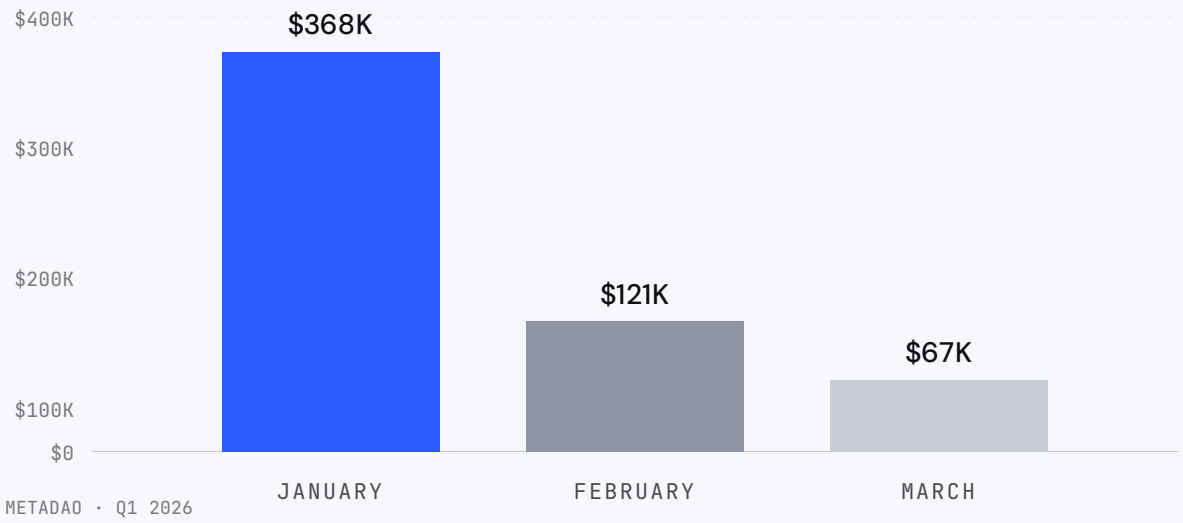
The Q1 fee range will collapse to a point estimate when MetaDAO publishes Q1 2026 financial statements.

// MONTHLY DECOMPOSITION

Daily fees averaged *$6.3K* across Q1 with a steep month-over-month decline.

Q1 2026 FEES

$571K -77% Q/Q



METADAO · Q1 2026

JANUARY

Daily fee peak above **$25K** mid-month against the Ranger Finance ICO subscription period (Jan 6–10). Daily fees averaged **$13K** — highest run-rate of the quarter.

FEBRUARY

Sharp Solana cooldown. Daily Futarchy AMM fees fell to **~$4.3K**. META compressed from $7+ to a $3.50–$4.00 range. Hurupay ICO (Feb 3) launched into weakening conditions.

MARCH

Daily fees compressed to **~$1.5–$2K**. Three platform-defining events: Ranger liquidation (Mar 12), Futardio launch (Mar 4), P2P.me Polymarket controversy (Mar 30).

// DAILY FEES · ARTEMIS

Volume profile against *three platform catalysts.*

Daily fees compressed from a Jan peak of ~$25K against the Ranger Finance ICO subscription window to a March exit-rate of ~$2.2K. Q1 average: **$6.3K daily**. Source: Artemis (futarchy.metadao.fi feed) + Novora reconciliation.

// CUMULATIVE Q1 REVENUE

$556K accumulated across *three months.*

SHAPE OF THE QUARTER

66% of Q1 revenue accumulated in January alone. The first ten days against the Ranger ICO subscription window contributed disproportionately to the full-quarter total.

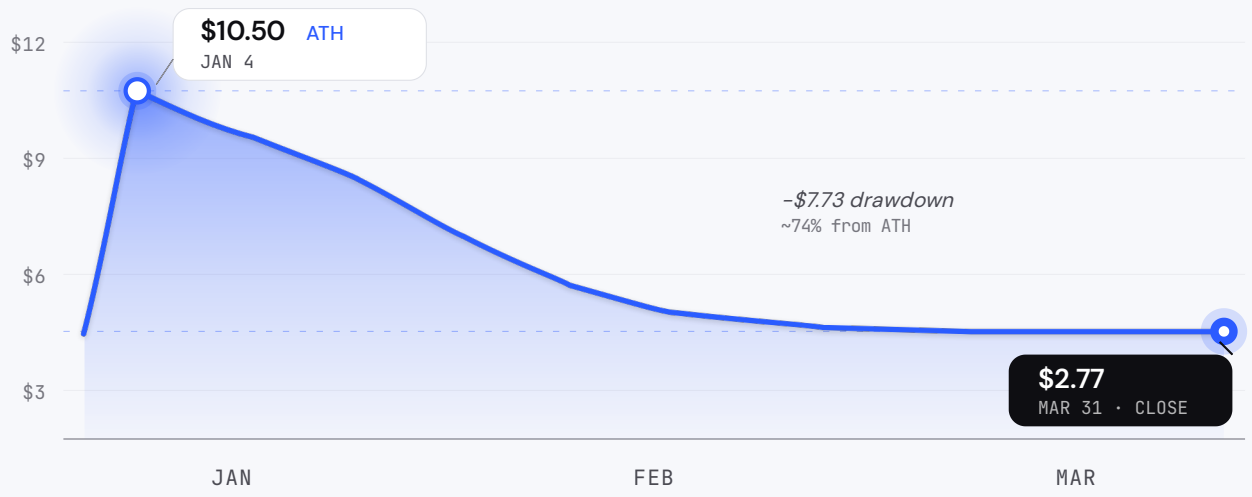
February added another **22%** ($121K), and March's contribution compressed to **12%** ($67K) as the platform-defining events shifted from launch revenue to governance precedent and infrastructure.

The cumulative shape is the inverse of what fee growth looks like in healthy compounding quarters — **front-loaded distributions are the structural norm** across the curated launchpad cohort.

// 04 · PLATFORM ACTIVITY & TOKEN PERFORMANCE

META compressed *−57%* during Q1 versus a Solana sector decline of similar magnitude.

META PRICE · Q1 2026



SUPPLY MECHANICS · Q1

Token burn (Omnibus)	~60K META
% of supply burned	~0.27%
Q1 net inflation	0%
OTC issuance (Q4 close)	$10M META
Performance package set for burn	2M META

The **2M META team performance package** is contingent on Q2 roadmap execution (SUPERCLAW proposal — bundled Q2 priorities with the burn).

GOVERNANCE · Q1

7 binding governance events executed successfully, including the Ranger liquidation and the SUPERCLAW Q2 roadmap proposal. Median proposal-market liquidity remains the platform's primary engineering bottleneck.

// TVL COMPOSITION

Platform-level TVL of *~$13M* is treasury-dominant across the ownership-coin cohort.

TVL COMPOSITION (DEFILLAMA, CURRENT)

ASSET	% OF TVL	NOTE
USDC	50.2%	Treasury-dominant. Ownership-coin commitment.
SOLO	11.5%	Ownership-coin token
AVICI	9.3%	Ownership-coin token
P2P	8.7%	Ownership-coin token
META	6.5%	Platform token
UMBRA	5.9%	Ownership-coin token
LOYAL · OMFG · FAF	7.3%	Combined remaining
ZKFG · FUTARDIO · SUPER	~0.6%	Smaller positions

READ

The composition is the platform's structural fingerprint: capital from each ICO sits in a futarchy-governed treasury — the asset-class commitment described in the ownership coin thesis.

AMM-resident TVL closed Q1 at $10.4M, down from $14.8M on Jan 31. Decline reflects ICO escrow outflows and META Meteora LP withdrawals during the Solana cooldown.

TVL is procedurally noisy because capital cycles through ICO escrow rather than parking. **Fee-velocity ratio (fees per $ of TVL)** will be introduced as a tracked metric in Q2 2026 reporting.

// 05 · PEER COMPARATIVE ANALYSIS

META trades at *19–24×*, a premium to Jupiter (15.5×) and Raydium (12.4×).

PROTOCOL	MCAP	Q1 REVENUE	ANNUALIZED	MCAP / ANN. REV
MetaDAO (Novora est.)	**$53M**	**$700K**	**$2.8M**	**18.9×**
MetaDAO (Artemis)	$53M	$556K	$2.2M	23.8×
Jupiter	$700M	$11.3M	$45.0M	15.5×
Pump.fun	$1.04B	$118.5M	$474.2M	2.2×
Raydium	$200M	$4.0M	$16.1M	12.4×

// NOVORA POV

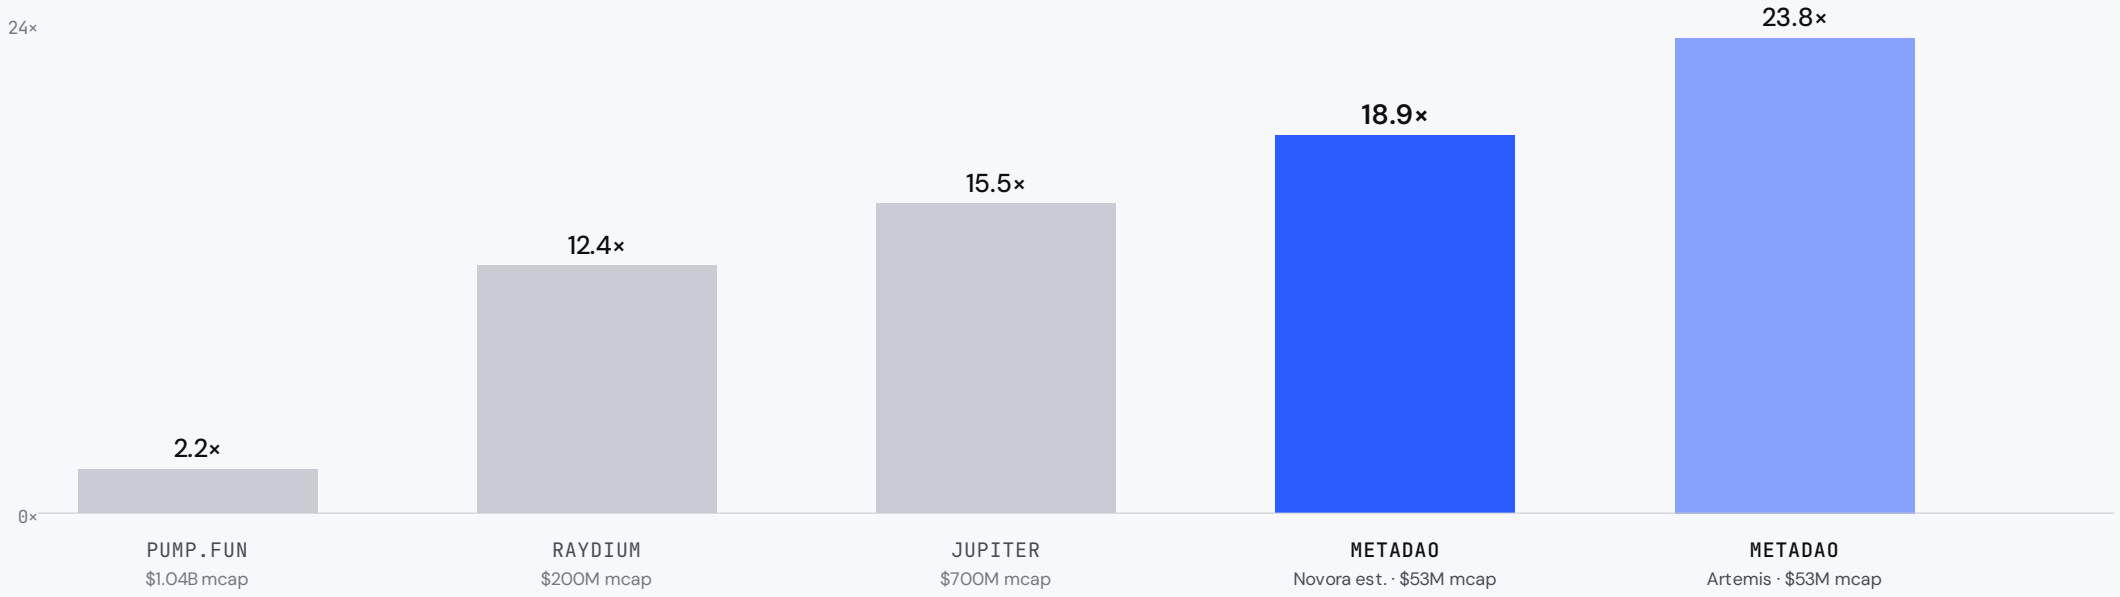
A flat MCap/revenue multiple does not adjust for the ownership-rights differential. **META holders have rights JUP and RAY holders do not**: a binding claim on platform-level treasury, the right to vote a buyback below NAV, and the right to liquidate. The Ranger precedent demonstrated those rights actually bind. Some portion of META's premium should be expected to persist on a structural basis as revenue scales.

The peer-multiple comparison treats every token as equivalent claim on protocol economics, which it is not. **META is the only token in this set with a binding claim on treasury and LP economics through futarchy.**

Decomposition: a structural premium for the ownership-rights model that META alone delivers, plus an execution premium that depends on Q2 launch cadence and Futardio scale-up. The first persists. The second is the lever investors are watching.

// MCAP / ANNUALIZED REVENUE

META sits in the *upper-mid cluster.*



META trades at **18.9× to 23.8× MCap/Annualized Revenue** depending on whether the Novora estimate (including Meteora LP fees) or the Artemis-only feed is used. Both bracket the same conclusion: a premium to Jupiter (15.5×) and Raydium (12.4×).

The premium is structural, not aspirational. **META is the only token in this set with a binding claim on platform-level treasury and LP economics through futarchy.** The Ranger precedent in Q1 demonstrated those rights actually settle.

// 06 · STRATEGIC DEVELOPMENTS

Seven events *shaped Q1.*

EVENT	DATE	IMPACT
Ranger Finance liquidation	Mar 12, 2026	**$5.04M returned to RNGR holders.** First successful onchain liquidation precedent.
Hurupay ICO	Feb 3, 2026	Stablecoin payments raise into weakening sentiment. Strong post-launch product progress.
Futardio launch	Mar 4, 2026	**Permissionless launchpad opens issuance throughput.** Q2 growth lever.
P2P.me Polymarket controversy	Mar 30, 2026	Insider-trading episode forces conduct-policy review for Q2.
Omnibus liquidity migration	Q1 (executed)	**~90% of META liquidity moved to Futarchy AMM.** ~60K META burned.
$10M META OTC raise (Proposal #34)	Q4 close, exec Q1	**Treasury from $1.96M → $12.24M USDC.** Removes financing-pressure overhang.
Colosseum STAMP integration	Finalized Q1	Solana hackathon pipeline routes through MetaDAO. Q2–Q3 cadence catalyst.

// THE RANGER PRECEDENT

First market-driven onchain liquidation of a protocol *by its tokenholders.*

MECHANICS

TRIGGER	Alleged misrepresentation of 2025 revenue figures.
RAISE	$3M hard cap during Jan 6–10 ICO subscription window.
MECHANISM	Futarchy decision market voted PASS > 3% time-weighted average.
RETURNED	$5.04M USDC distributed to RNGR holders from protocol treasury and LP position.
RESOLVED	March 12, 2026.

WHY THIS MATTERS

Onchain liquidations have happened before. **What was new here was that a decision market settled the outcome.**

The Ranger precedent in Q1 settled the question of whether MetaDAO's ownership-rights mechanism actually binds. **The answer: it does. $5.04M was returned to holders.**

Establishes binding-contract precedent that institutional allocators have wanted — the legal claim on the issuing entity is now demonstrated rather than asserted.

// HEADLINE NUMBER

> $5.04M *returned to holders.*

// 07 · Q2 2026 OUTLOOK

Strong foundation. *Fee growth as the lever.*

CATALYST	THRESHOLD	DIRECTION
Futardio launch cadence	2–3 launches/month at modest sizes	Bullish if achieved
Monthly aggregate fees	Return to $200K+ range	Bullish if achieved
Colosseum STAMP pipeline	1–2 STAMP-routed launches in Q2	Bullish if achieved
P2P.me conduct rules	Codified ICO conduct policy	Bullish on disclosure
Curated flagship launches	Hurupay graduation + new announcements	Bullish on quality bar
Institutional investor coverage	New non-Solana-native funds engaged	Bullish on distribution
New ownership-coin onboardings	1–2 new teams committed to the model	Bullish on platform depth

Q2 REVENUE FORECAST

Each curated ICO contributed **~$100–200K cumulative fees** in Q4'25–Q1'26 cycles. Three Q2 launches at this rate produces **$300–600K in launch-attributable fees**, plus secondary trading on the existing ~$40M MCap ownership-coin cohort. The MCap/revenue multiple at **19–24× compresses toward Jupiter's 15.5×** as revenue scales.
